

Estimated time: 5 minutes

Learning objectives

By the end of this lesson you'll be able to:

- Recall the arc of Cowork 101 and what each module gave you
- Pick the next moves that keep you using Cowork after the course ends

What you've covered

WHAT YOU'VE COVERED

MODULE 1

Meet Claude Cowork

What Cowork is, how it differs from Chat and Code, the kinds of work it's built for, and your first real task.

MODULE 2

Make Claude Cowork Yours

Global instructions, projects, skills, and plugins — how much more capable Cowork becomes when it knows what you know, has access to what you have access to, and does things the way your team does.

MODULE 3

Use Claude wherever you work

Cowork in your browser via Claude in Chrome, and inside Word, Excel, PowerPoint, and Outlook via Claude in M365.

MODULE 4

Sharing and safety in Claude Cowork

Working with autonomy responsibly, validating what you build, and turning personal workflows into team infrastructure.

Hand off a task, get a polished deliverable.

The throughline: Cowork goes beyond chat to allow you to delegate real work. Everything else in the course builds on that.

Try it now

Pick one of these to do this week.

- **Set up memory.** Write a five-sentence global instructions block, or create a project for a stream of work you're already in.
- **Schedule a task or set up Dispatch.** Take a recurring deliverable and put it on a cadence. Or set up Dispatch so that the next time something comes to mind off-hours, you can hand it to Cowork.
- **Install a plugin.** Go to Customize → Plugins, install the plugin closest to your role, and run it against this week's version of your work.
- **Try Claude in Chrome or M365.** Pick the surface that aligns with where most of your real work happens, install it, and use it on one task.
- **Share something you built.** Share a use case you found valuable, a workflow that produced great results, or a skill you've built with your team. You could be the unlock they need to get more comfortable working with Claude.

Go deeper

A few learning paths worth knowing about:

- **AI Fluency: Framework & Foundations.** The foundations of working effectively with AI — prompting, evaluating output, knowing when AI is and isn't the right tool.
- **AI Capabilities and Limitations.** A deeper survey of what generative AI tools can do across modalities and surfaces.
- **Claude 101.** The companion course on using Claude across all surfaces.
- **Claude use-case library.** Filter to Claude Cowork for ideas and inspiration on what to delegate next.

Feedback

As you progress through the course, we'd love to hear how you're using concepts from it in your work, plus any feedback you may have. Share your feedback [here](#).
